

Electrical Engineer

Reference Number: BD021221

As an Electrical Engineer, you don't just work with circuits — you bring energy to innovation and life to progress.

At ALTEN, we are certain that the success of our projects is due to the people who make up our team. That's why, if you have experience as a Electrical Engineer, we are committed to boosting your talent, meeting your professional expectations, and making you feel right at home.

Do you want to build the world of tomorrow today? Keep reading!

Responsibilities:

- Participate in and improve installation workflows, including planning, field support, and documentation.
- Follow and adapt standard procedures for commissioning and verification of energy systems.
- Conduct site surveys and support installation processes.
- Prepare and review technical documentation.
- Guide and mentor junior engineers or technicians.
- Delegate tasks, support troubleshooting, and promote good engineering practices.
- Communicate effectively with field teams, internal stakeholders, and clients.

What can we offer you?

- Joining a competitive, multinational company that is constantly growing.
- Integration into a highly qualified team of professionals with a great work environment—innovative and dynamic.
- Specialized training and ongoing professional development.
- Social benefits.
- Competitive salary.

Who are we?

We are a team. We are part of ALTEN, a European multinational specializing in providing consulting, information technology, and engineering services to the leading companies in the Portuguese market.

If you like numbers, we can tell you that in Portugal we have a revenue of 10.9 million euros, 2 headquarters, and a team of 215 professionals.

Moreover, at ALTEN, we take pride in offering equal opportunities regardless of gender, age, abilities, or country of origin. Our commitment is to talent and to the people who possess it.

Requirements:

- Degree in **Electrical Engineering** or related field.
- **3+ years** of relevant experience in electrical or energy systems.
- Experience with **electrical panels**, hardware integration, and on-site installations.
- Familiarity with **energy management systems** and **IoT architectures** (e.g., Modbus, MQTT).
- Knowledge of **site surveys, commissioning, and testing procedures**.
- Ability to work with **firmware or embedded systems** (bonus, not mandatory).
